Thereat of platelet glycoprotein Ib alpha associated with a variant of Bernard-Soulier syndrome (Nancy I).";
Br. J. Haematol. 89:386-396(1995).
-I- FUNCTION: GP-IB, A SURFACE MEMBRANE PROTEIN OF PLATELETS,
PARTICIPATES IN THE FORMATION OF PLATELET PLOGS BY BINDING TO VON WILLEBRAND FACTOR, WHICH IS ALREADY BOUND TO THE SUBENDOTHELIUM.
C. -I- SUBUNIT: GP-IB ALPHA AND BETA ARE DISULFIDE LINKED. GP-IX IS
C. OMPLEXED WITH THE GP-IB HETERODIMER VIA A NON COVALENT LINKAGE.
C. -I- SUBCLIULAR LOCATION: Type I membrane protein.
C. -I- THE GLYCOCALICIN, WHICH IS APPROXIMATELY COEXTENT LINKAGE.
C. -I- PTM: GLYCOCALICIN, WHICH IS APPROXIMATELY COEXTENT HTHE

                                             LOCATION. 911 to 1150

IDBNTIFICATION METHOD: similarity to tandem EGF-like
OTHER INFORMATION: protein-protein interactions
NAME/KEY: 7th EGF-like repeat
LOCATION: 1353 to 1393
IDBNTIFICATION METHOD: similarity to epidermal growth
OTHER INFORMATION: Involvement in receptor-ligand
NAME/KEY: Alternative splice segment
LOCATION: 1394 to 1404
IDBNTIFICATION METHOD: experimental
OTHER INFORMATION: developmentally regulated

```
This invention describes a novel composition containing (apart from a carrier or excipient), a novel PRO245 polypeptide (I), its agonist or antagonist, or their fragments, for modulating: (i) infiltration of antagonist, or their fragments, for modulating: (i) infiltration of inflammatory cells into tissue; (i) an immune response; or (iii) T cell proliferation. The composition increases or decreases any of the effects (I)-(ii). The products of the invention have anti-inflammatory, anti-autoimmune and anti-diabetic activity. (I), and its (ant)agonists and their fragments, are used to treat immune-related diseases, particularly T cell-mediated diseases. The diseases treated include systemic lupus erythematosus, rheumatoid arthritis, juvenile chronic arthritis, spondyloarthropathies, systemic solerosis (scleroderma), carthritis, spondyloarthropathies, systemic sclerosis (scleroderma), carthritis, spondyloarthropathies, systemic sclerosis (scleroderma), carthritis, autoimmune pancytopenia, paroxysmal nocturnal hemoglobinuria), autoimmune hemotytopenia, paroxysmal nocturnal hemoglobinuria), autoimmune hemotytopenia, paroxysmal nocturnal hemoglobinuria, juvenile lymphocytic thyroiditis, atrophic thyroiditis, diabetes mellitus, immune-mediated renal disease (dlomerulonephritis, juvenile lymphocytic thyroiditis, atrophic chypathic demyellnating polyneuropathy, Guillain-Barte syndrome, chronic active demyellnating polyneuropathy, infectious hepatitis crohn's disease, chronic active mepatitis, publiancy blilary cirrhosis, garanlommators chonic active mepatitis, inflammatory bowel disease contonic active hepatitis, inflammatory bowel disease solumnune mediated syndrespiect syndrespiect chronic active hepatitis, and sclerosing cholangitis, inflammatory bowel disease solumnune mediated syndrespiect contains and sclerosing erytheme or immune mediated solutis; sorchises and profilm mediated contains deniand disease sorchism and profilmine profilmine contains and sclerosing erytheme or immune contains deniant denian and account
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     bullous skin diseases, erythema multiforme, contact dermatitis, psoriasis, sathma, allergic rhintis, atopic dermatitis, food hypersensitivity, urticaria, eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonitis, and transplantation associated diseases

The new human secreted proteins are encoded by polynucleotides obtained from human placenta, adult testes, fetal kidney, fetal adult brain, adult brain and adult blood cDNA libraries.

Expension adult brain and adult blood cDNA libraries.

The polynuclectides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as activity, tissue growth activity, activiti/inhibhla activity, chemotactic/chemokinetic activity, anti-inflammatory activity, activity, activity, and tumour inhibition activity, The polynucleotides are also stated to be useful for gene cativity. The sequences lidentified by a secretory leader contifining the polynucleotide and it is thought that the

AAY13344-403 represent secreted and transmembrane human proteins. The cDNA sequences are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gllomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ō

The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenic disorder in mammals by modulating cell proliferation, and indiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with imappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atheroscierosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB2438 represent invention.

The present sequence is the human protein PRO331, encoded by UNO292 cDNA, designated as clone DNA40981. It is isolated from human foetal brain tissue. Portions of PRO331 has homology to the LIG-1 protein.

CI tenhances or suppresses the infiltration of inflammatory cells into tissues, proliferation of T-lymphocytes and modulates the immune response. This sequence is useful for treatment of immune related disorders, like SLE, rheumatoid/juvenile arthritis, spondyloarthropathy, systemic sclerosis (scleroderma), idiopathic inflammatory myopathies such systemic sclerosis (scleroderma), idiopathic inflammatory myopathies such cas dermatomyositis, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, thrombocytopenia, thyroiditis e.g. Grave's disease, diabetes mallitus, immune-mediated renal disease e.g. comerulonephritis, demyelinating diseases such as multiple sclerosis and cullar syndrome, hepatobiliary diseases like hepatitis and cullar plantar cirrhosis, inflammatory and fibrotic lung diseases such as inflammatory bowel disease (e.g. Crohn's disease), autoimmune or immunological diseases of the lungs such as sosinophilic pneumonia and transplantation associated diseases such as graft-versus-host-disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

AAU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing pro propagate, rectal, or live tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor alpha (TMF alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation of chondrocytes, the proliferation of funer ear utricular supporting cells or cartilage, the proliferation of funer ear utricular supporting cells or of T-lymphocytes, the release of a cytchine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the proliferation of endothelial cells. Some of the factor VIRA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The prolifers encoding proliferation of collections and proliferation of collections in proliferation of collections are supported to dentify the proliferation of encoding proliferation of collections in proliferations of a cyclosic or inhibit binding of A-peptide colles involved in binding interactions. The polypetides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                           3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   284

The sequence responses Human FKO331 (unt221), a prouter involved in the sequence responses. PRO polypeptides, and (ant)agonists to them, are used in compositions for modulating infiltration of inflammatory cells into a tissue, modulating an immune response and modulating proliferation of T-lymphocytes in response to an antigen. Immune related diseases can of T-lymphocytes in response to an antigen. Immune related diseases can be treated with the compositions, such as, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthopathies, systemic sclerosis, idiopathic inflammatory myopathies (e.g. polymyositis), Sjoqren's syndrome, systemic vasculitis, arcoidosis, autoimmune haemolytic anaemia (e.g. immune pancytopaenia), cutoimmune thrombocytopaenia (e.g. idiopathic thrombocytopaenic purpura), thyroiditis (e.g. Grave's disease, Hashimoto's thyroiditis), diabetes cutoimmune thrombocytopaenia (e.g. idiopathic thrombocytopaenia correlated renal disease (e.g. glomerulonephritis), campliating diseases of the central and peripheral nervous systems e.g. cenyelinating polyneuropathy, hepatobiliary diseases such as infectious central and peripheral nervous systems. Ce hepatitis (hepatitis, A. B. C. D. E and other non-hepatotropic viruses), auto immune chronic active hepatitis, primary biliary cirrhosis, cutoimmune chronic active hepatitis, primary biliary cirrhosis, and colleis, cromine and Whipple's disease), and colleis, cromine and Whipple's disease), and colleis, cromine and whipple systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anti-PRO antibodies can be used to detect PRO and \Omega polypeptides, antibodies and (ant)agonists can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        eosinophilic pneumonia, idiopathic pulmonary fibrosis, transplantation associated diseases including graft-versus-host-disease and graft rejection. PRO polypeptides can be used to diagnose immune related diseases, to identify inhibitors, and to stimulate the proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              e.9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents Human PRO331 (UNQ292), a protein involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Composition for diagnosing and treating immune related diseases, rheumatoid arthritis and diabetes mellitus, comprises a PRO polypeptide, agonist, antagonist or fragment -
